

PENETRATION TESTING REPORT

FOOTPRINTING & NETWORK SCANNING PHASES

W2-PM-FINAL | CYBERSECURITY | NETWORKWALKS

Pentester Name: Gokul V

Program/Batch: B083 - Networkwalks

Date: 16 September 2026

Modules completed: W2-PM1, W2-PM2, W2-PM3, W2-PM4, W2-PM5

Client/Target:

1. Networkwalks (secured written permission already)
2. My own local lab network (10.0.0.0/24)

Permission secured from client? Yes

Phases covered:

- Phase 1: Reconnaissance & Footprinting
 - Phase 2: Scanning & Network Discovery
 - Phase 3-5: In Progress
-

1. LIABILITY DISCLAIMER

I have performed these activities only on the systems & devices where I had secured written permission or the devices/systems that I own myself. All these materials are for education and research purpose only. Do not use anything from here to break the law. The instructor, the authors and Networkwalks are not responsible for what you do with this knowledge. Every action you take is your own responsibility. Misuse can lead to criminal charges, heavy fines, loss of your job and a permanent record. In most countries unauthorised access is a crime even when nothing is damaged.

2. INTRODUCTION

This report covers footprinting the networkwalks.com domain using multiple Kali Linux tools (W2-PM1), Google Dorking with GHDB (W2-PM2), footprinting with Maltego (W2-PM3), footprinting with theHarvester (W2-PM4), and scanning my own local network

with Zenmap (W2-PM5). Together these modules cover the reconnaissance and scanning phases of a penetration test.

All commands were run in Kali Linux (footprinting tools, Maltego, theHarvester, Zenmap). Every step below includes the exact command used, the result I observed, and a short note on why the finding matters from an attacker's point of view.

3. TOOLS USED

Tool	Purpose
Kali Linux	Operating system used for reconnaissance activities
WHOIS	Find domain registration details (owner, dates, name servers)
WhatWeb	Fingerprint web technologies (server, CMS, plugins, IP)
Nslookup	Resolve the domain name to its IP address using DNS
Curl -I	Read the HTTP response headers of the website
Wafw00f	Detect whether a Web Application Firewall protects the site
DNSRecon	Enumerate all DNS records (NS, MX, SPF, TXT, SRV)
Maltego	OSINT tool for harvesting email addresses and mapping relationships
theHarvester	Gather emails, subdomains, and hosts from public sources
Zenmap (Nmap GUI)	Scan the local subnet to find live hosts, IPs and MAC addresses

4. ACTIVITIES PERFORMED

4.1 Footprinting & Reconnaissance (PM1)

I performed reconnaissance against the networkwalks.com domain using six Kali Linux tools: WHOIS, WhatWeb, Nslookup, Curl, Wafw00f and DNSRecon.

1. WHOIS - Identified the domain registrar as GoDaddy.com, LLC with registration date 2019-11-06. The name servers point to HostGator (NS6135.HOSTGATOR.COM and NS6136.HOSTGATOR.COM). Registrant details are protected by Domains By Proxy, LLC.

2. WhatWeb - Identified WordPress 7.1, WordPress Download Manager 3.3.58, Apache web server, Bootstrap 7.1, and jQuery 3.7.1. The server IP is 192.232.216.135 and an email address (info@networkwalks.com) is publicly exposed.

3. Nslookup - Resolved the domain to IP address 192.232.216.135.

4. Curl -I - The HTTP response headers revealed the WordPress REST API endpoint /wp-json/ is exposed. The server is Apache. The cookie __wpdm_client confirms WordPress Download Manager is in use.

5. Wafw00f - Detected that the site is behind ModSecurity (SpiderLabs) Web Application Firewall.

6. DNSRecon - Enumerated 8 DNS records including:

- SOA: ns6135.hostgator.com
- NS: ns6135.hostgator.com, ns6136.hostgator.com
- Bind Version: 9.16.23-RH
- MX: mail.networkwalks.com (192.232.216.135)
- TXT (SPF): v=spf1 +a +mx +ip4:50.87.144.87 +include:websitewelcome.com ~all
- SRV: _autodiscover._tcp.networkwalks.com

4.2 Google Hacking Database (GHDB) - PM2

I used Google Dorks from Exploit-DB's GHDB to find exposed devices and documents.

Task 1: Found live security cameras using dorks like:

- intitle:"webcamXP" inurl:8080
- inurl:"/view/index.shtml"

Results included cameras from the United States, Serbia, Italy, Netherlands, and other locations.

Task 2: Found mathematics PDF ebooks using dork:

- intitle:index.of "parent directory" mathematics pdf

Example finding: <https://kdl.kogistate.gov.ng/wp-content/uploads/2023/08/Engineering-Mathematics-4th-ed.pdf>

4.3 Maltego - PM3

I used Maltego Community Edition in Kali Linux to find email addresses related to networkwalks.com.

Results:

- admin2@networkwalks.com
- admin3@networkwalks.com
- admin4@networkwalks.com

The tool also revealed breach data (Combo Lists), document references, and aliases associated with the domain.

4.4 theHarvester - PM4

I used theHarvester in Kali Linux to gather information about microsoft.com.

Task 1: theHarvester -d microsoft.com -l 1000 -b baidu

Results:

- Emails found: 1 (postmaster@microsoft.com)
- Hosts found: 13 (including support.microsoft.com, account.microsoft.com, careers.microsoft.com)

Task 2: theHarvester -d microsoft.com -l 50 -b all

Results:

- ASNs found: 7
- Interesting URLs found: 5
- IPs found: 147
- Multiple subdomains and hosts discovered

4.5 Network Scanning with Zenmap - PM5

I used Zenmap in Kali Linux to perform network discovery on my local lab network.

Step 1: Identified my local IP address (10.0.0.2/24) using ip -4 addr show.

Step 2: Ran a Ping Scan on subnet 10.0.0.0/24 using Zenmap.

Results:

- 3 hosts are live
- IP addresses: 10.0.0.1, 10.0.0.2, 10.0.0.3
- MAC addresses: 52:55:0A:00:00:01, 52:55:0A:00:00:02, 52:55:0A:00:00:03

Step 3: Saved the network topology as PDF.

5. RISK ANALYSIS / IMPACT

#	Risk / Finding	Evidence / Observation	Potential Impact	Risk Level
1	Web technology information exposed	WhatWeb identified WordPress 7.1 and WP Download Manager 3.3.58	Attackers may use exposed version info to find known exploits	Medium
2	Server IP address identifiable	Nslookup resolved to 192.232.216.135	Provides network location of the web service	Low
3	HTTP technical information exposed	Curl returned /wp-json/ endpoint	May assist technology fingerprinting	Low
4	WAF technology identifiable	Wafw00f identified ModSecurity	Reveals security architecture	Low
5	DNS infrastructure information exposed	DNSRecon identified DNS, mail, and service records	Can help build infrastructure profile	Medium
6	Email addresses harvestable	Maltego found admin2, admin3, admin4 @networkwalks.com	Emails can be targeted for phishing	Medium

#	Risk / Finding	Evidence / Observation	Potential Impact	Risk Level
7	Multiple live hosts visible on local network	Zenmap identified 3 live hosts	Unknown devices may be present	Medium

Risk level key: ● Critical ● Medium ● Low

The risks above are observations from the footprinting and scanning exercises, not confirmed vulnerabilities.

6. RECOMMENDATIONS

1. **Review publicly exposed technology information** - Organizations should regularly review what information about their web technologies, CMS and plugins is publicly visible.
 2. **Keep software updated** - CMS platforms, plugins and other web technologies should be regularly updated and reviewed against current security advisories.
 3. **Review HTTP headers** - HTTP response headers should be reviewed to determine whether unnecessary technical information is being exposed.
 4. **Review DNS records regularly** - DNS records should be checked periodically to ensure that only required information and services are publicly exposed.
 5. **Properly configure and monitor the WAF** - Keep the WAF (ModSecurity) enabled and tuned.
 6. **Protect email addresses from harvesting** - Consider using contact forms instead of exposing email addresses publicly.
 7. **Perform regular internal network discovery** - Organizations should periodically scan their own networks to identify active devices.
 8. **Investigate unknown devices** - Any unexpected device discovered during network scanning should be investigated.
 9. **Perform security testing with authorization** - Reconnaissance and scanning should only be performed against systems and networks where appropriate authorization has been provided.
-

7. CONCLUSION

During Week 2 of my Cybersecurity & Ethical Hacking internship, I completed practical activities covering footprinting, reconnaissance, Google hacking, OSINT, and network scanning.

In the footprinting activity, I used six Kali Linux tools to collect information about the target domain. I learned how WHOIS can provide domain information, WhatWeb can identify web technologies, Nslookup can resolve domain names, Curl can inspect HTTP headers, Wafw00f can identify a WAF, and DNSRecon can provide additional DNS information.

In the GHDB activity, I used Google Dorks to find exposed security cameras and downloadable PDF ebooks, learning how attackers use Google to find sensitive data.

In the Maltego activity, I harvested email addresses associated with the target domain, which could be used for phishing attacks.

In the theHarvester activity, I gathered emails, subdomains, and hosts from multiple public sources.

In the network scanning activity, I used Zenmap to identify my local network configuration and discover active hosts. I also collected IP and MAC address information and created a network topology.

The exercises showed me that information gathering is an important part of cybersecurity. Even before attempting to exploit a system, a security professional can learn a significant amount about an environment by carefully analyzing publicly available information and network responses.

Finally, I learned that reconnaissance and scanning must always be performed within an authorized scope. These activities were completed as part of the assigned educational cybersecurity lab.
